Cuong Hoang

CSC3320

Lab 2

A) /home/choang7

B) In Step (3), there was no file in my home directory (/home/choang7), so the result returned empty when I used the command "ls" to list all the content in my current working directory. In step (4), I created a new folder "csc3320" in that working directory. Therefore, when I used "ls" to list all the content, it shows "csc3320", which is the file I have created from that home directory.

C) pwd

D) mkdir lab2

E) cd lab2

F) the special character ">" between "cat" and "myLab2.txt" indicates that we will create a new file named myLab2 with type "txt" and redirect us to that newly created file "myLab2.txt" and wait for input from user. After user's input, we press "CTRL -D" to indicate that this is the end of the file.
